

Verify the consent before you pay for the lead

The problem. You inherit the compliance risk of how every lead was sourced — but you're trusting the seller's word on consent. Evidence a third party can't independently verify invites scrutiny and fails the moment a dispute or audit lands. Under TCPA — and the wave of CIPA/WESCA “wiretapping” class actions — unverifiable consent has become a balance-sheet risk.

What LeadProof does. LeadProof is the independent system of record for consent — a purpose-built, patent-pending certification standard with no real equivalent. Independently verify a tamper-evident certificate of exactly what a consumer was shown and did at the moment of consent — across web forms, phone calls, and Google & Meta lead-ad forms — before and after you buy.

Why it protects you

- **Check before you pay.** Match a lead to its certificate on hashed identifiers, run Identity Match and line-type verification, and read the trust and fraud signals — no personal data exposed.
- **Verify independently.** Every certificate recomputes its own cryptographic seal and RFC-3161 trusted timestamp at leadproof.ai/verify — offline, indefinitely. The audit-grade standard: trust neither the seller nor us.
- **No session replay.** The proof isn't a replayed session — the very method now drawing “wiretapping” class actions under CIPA and WESCA. Nothing to intercept, nothing to defend.
- **Governance built in.** A provenance-graded trust score (Certified / Verified / Standard / Flagged), continuous disclosure-drift monitoring, and active AI compliance checks against the sealed content — evidence you were checking, not just storing.
- **Audit-ready on demand.** Generate a sealed, independently verifiable evidence package and a signed attestation for any record — for counsel, an auditor, or a regulator.
- **No platform lock-in.** Certificates cover web forms, calls, and Google & Meta lead-ad forms alike — captured natively at the source, with no mandatory routing platform or lead-management subscription to buy into.

How it works

- 1 Receive a lead with a LeadProof certificate ID.
- 2 Check it (hashed match + Identity/line-type + signals) before you claim it — no PII.
- 3 Claim, verify, run compliance checks, or pull an audit-ready evidence package anytime.

A LeadProof certificate

CONSENT CERTIFICATE

CERTIFIED · 92

pp_3f9a7c2e...4b1d

Sealed 2026-07-30 14:02 UTC · RFC-3161 trusted timestamp · reproducible offline

✓ Consent content — exact language shown, sealed

✓ Trust signals · captured at consent

✓ Disclosure archival tree · 2 documents

✓ Integrity hash · SHA-256 · a17f...9e

Verify independently at leadproof.ai/verify — no account required
